Adam Schiller is a proud veteran from the United States Air Force, a father of two (twins), and an employee for the Department of Defense, United States Air Force, located at 309 Aerospace Maintenance and Regeneration Group (AMARG) in Tucson, Arizona. Mr. Schiller is known for his strong integrity and work ethics. Mr. Schiller is currently working on his Masters of Science in Quality Assurance (MSQA) at California State University Dominguez Hills (CSUDH). The reason he selected this field of study is because the graduate program at CSUDH promotes the concepts of continually seeking improvement, while at the same time remaining consistent that without measurement there is no baseline, no matrix to compare, and no opportunity for standardization. Mr. Schiller recently performed an “in-house” inspection of the Nondestructive Inspection (NDI) that resulted in the replacement and updating of new measurement inspection equipment, a remolding of the department, as well as the recognition from his Commander for his accomplishments. Mr. Schiller is responsible for implementing, training, coaching, and mentoring leadership with respects to Continuous Process Improvement (CPI), Lean, 5S, Six Sigma and multiple other analytical skills in applying a wide variety of continuous improvement tools and techniques for measuring effectiveness, efficiency, and productivity of work and administrative processes.
