

NCSLI Utah Section Meeting Hosted by Western States.

Utah

Michael Coleman
mike.coleman@flukecal.com

On Tuesday December 4, 2018, the NCSLI Utah section meeting held its winter meeting at Western States Calibration in Salt Lake City, Utah.

We had 20 in attendance representing third-party Cal labs, Department of Energy, aerospace, medical device manufacturing, calibration instrument manufacturing, automotive component manufacturing, and food manufacturing.

The presentations updated the group on important NCSLI information, upcoming changes to the SI, a review of important changes implemented in

ISO/IEC 17025:2017, recommendations for evaluating measurement decision risk for compliance with ISO/IEC 17025:2017, recommendations for evaluating and managing risk in calibration processes and common errors encountered when using drywell calibrators. The meeting provided the opportunity for a lot of great discussion between the attendees and presenters. We want to thank Western States Calibration for providing the venue, lab tour and fantastic meeting hosts! Additel Corporation and Fluke Calibration for sponsoring refreshments and lunch, and NCSL International for their continued support for promoting measurement education and skill development. If you are interested in hosting an upcoming Utah section meeting please reach out to Mike Coleman.
